An Evolution in Water Storage Tanks Industry

PLASTIC TANK

CONCRETE TANK

EVOLUTION TO WATER TANKS

STAINLESS STEEL TANK

Welcome to the **ERA** of Stainless Steel **WATER TANKS**

Water is life and a natural remedy when consumed as well as stored properly. Stainless Steel Water Tank is the one stop solution for hygienic and defensive water storage system. Stainless Steel is opposite of getting rust and can sustain even in sea water conditions. Its functionality of sustaining in these harsh conditions proves its potential of durability. In

terms of setting up, stainless steel water tank installation and usability is far more easy than plastic and concrete water tanks.

Stainless Steel Water Tanks are much more capable in guarding the water purity due to its multiple protective layers. Every protective layer of Stainless Steel is moulded very carefully while shaping it into a durable water tank.

Keep Your Water in Healthy and Hygienic Environment

Why Purever?

As the name denotes,
PUREVER MEANS
PURITY FOR EVER.

Purever stainless steel water tanks offers 100% safe and secure water storage solutions, more reliable than plastic and concrete water tanks. Stainless steel water tank is very much capable of handling the pace of complexities which other materials cannot succeed in. With zero maintenance, stainless steel water tank is not only efficient in terms of health but also a cost effective creation by Purever.

Water Stored in plastic or concrete water tanks contains contamination in it which can cause serious harm on our bodies. Normal other methods of purifying the water can't remove these impurities and this unawareness can be the source of various health issues. But, fortunately, the solution is now available in the form of Purever Stainless Steel Water Tanks.

Stainless Steel**

Make A Healthy Choice of Stainless Steel Water Tanks

Stainless steel is very safe and preferable for many entities; hence also use as making surgical equipment's. In comparison to plastic and concrete tanks, stainless steel tanks will keep the water clean and unaffected. As Stainless steel water tanks are highly resistive to corrosion. These tanks are not only sturdy, but require the least maintenance.

Benefits of Stainless Steel Water Tanks:

- TREMENDOUS DURABILITY
- RECYCLABLE NATURE
- HYGIENIC
- LONGEVITY

Hygienic Material

Stainless steel has a proven record of success in areas such as hospitals where sanitation and ease of cleaning are so important. Stainless steels hygienic properties, corrosion resistance, strength and form ability are important benefits to users in this sector. Its characteristics of having no pores or cracks to harbour dirt, grime or bacteria is another reason why stainless steel meets all the criteria of a healthcare facility.

The material is robust, easy to maintain and

therefore very durable which makes the products economical over the lifetime of the building. Other benefits include:

- Resistance to moisture
- Scratches and grooves lose their sharp edges quickly and blend into the surface
- Lasts for a lifetime of the building
- Stainless steel is fully recyclable and made from up to 80% recycled materials

1.5

HIGH-QUALITY MATERIAL

Thickness
1.5 mm

The thickness of stainless steel is **1.5 mm** which are on average around **80% thicker** than other manufacturers, of the same general capacities and dimensions.

Stainless Steel Grade

- 2205 Duplex Grade Stainless Steel.
- 316Ti Titanium Stainless Steel.
- Surgical Stainless Steel.

High-Quality Material

The use of stainless steel as the material of first choice for hygienic water storage has become today's standard for good reasons. This material is robust and, easy to maintain, and therefore is very durable which makes the products economical over the life time of the building.

"Stainless steels contain at least 10.5% chromium (Cr) and no more than 1.2% carbon (C). They form a self-regenerating surface layer (passive layer) that gives the material its resistance to corrosion, thereby ensuring significantly improved characteristics compared to unalloyed steels. Purever uses

steels with a higher chromium, nickel, molybdenum content and titanium as an additional alloy component for its bacteria free properties. This combination further increases resistance to corrosion."

Obstacles with Plastic & Concrete Water Tanks

Water is life and a natural remedy when consumed as well as stored properly. Stainless Steel Water Tank is the one stop solution for hygienic and defensive water storage system. Stainless Steel is opposite of getting rust and can sustain even in sea water conditions. Its functionality of sustaining in these harsh conditions proves its potential of durability. In terms of setting up, stainless steel water tank installation and usability is far more easy than plastic and concrete water tanks.

Stainless Steel Water Tanks are much more capable in guarding the water purity due to its multiple protective layers. Every protective layer of Stainless Steel is moulded very carefully while shaping it into a durable water tank.

**Small
Changes
Big
Differences**

Making world a better place to live with Stainless Steel Water Tanks, a safe and complete hygienic place to store water for daily usage. Purity of water cannot be preserved in plastic or concrete water tanks, several researches have proved the diverse side effects of infected water on human body. Major Issues like maintenance, cleaning and cracking are very common in plastic or concrete water tanks due to lack of sustain in

various climate conditions. On the other hand, Stainless Steel Water Tanks are highly competitive in every atmosphere protecting the water from getting contaminated.

Every single stainless steel water tank is equipped with stainless steel lock latches, water level controller and many more. Regarding installation & connectivity, we only use stainless steel fittings, which also lower your concern regarding the maintenance.

Dealing in all commercial and residential sectors, we also offer with a unique option of customize stainless steel water tanks. You can share the custom layout of the tank as per your requirement and we will create it for you. Just share your dream tank requirement as per the available location and give a healthy gift to your family.
